ABOUT ME

I'm a Front-end developer. Nigerian, currently living in Dublin, Ireland. After my college degree in "Mass Communication" which explored Broadcasting communications, Public relation and Advertising, I decided to change career path to client-side programming due to my aptitude in digital technology. I started my masters programme in "Applied Digital Media" in February 2018, at Griffith College Dublin, straight into the challenging world of Javascript using p5*. At the completion of my masters programme, I was conversant with Web development and Publishing, Game design, Visual Communication, Interaction Design and Data Visualization but my interest in Web development and User experience design made me took the career path as a Front-end Developer. Now, I design and develop experiences that makes people's live simple. I'm hard working, super curious, passionate, dedicated, and also a fast learner!
